Systra Careers

About Systra:

SYSTRA is one of the world's leading engineering and consulting groups specialized in public transport, mobility solutions, bridges and urban infrastructure. For more than 60 years, the Group has worked alongside cities and regions to contribute to their development by creating, improving and modernizing their transport infrastructures.

Planning today for efficient travel tomorrow is the key to the consultancy work entrusted to SYSTRA.

Our network of more than 1,000 consultants is located throughout the world to deal with all your problems and provide tailor-made support.

Choosing SYSTRA for the design of a project means opting for a global leader in the design of infrastructure, both railway lines and civil engineering structures. From preliminary studies and sketches to execution studies and independent review, our design departments are involved at every stage of the studies and in every field. Layout, geotechnics, earthworks, underground or overhead infrastructures, systems, but also the design of rolling stock, buildings, operating and maintenance schemes, with constant attention paid to the environment, and sustainable design and construction.

SYSTRA is an expert in Project Management and Construction Supervision services. From Light Rail and Mass Transit to High Speed Lines, not to forget Conventional Rail and Exceptional Infrastructure, our Engineers have managed the delivery and supervised the construction of some of the largest and most complex transportation projects. With blended teams of Project Management and Technical experts, we tackle your challenges as a true partner, always keeping in mind the best project interests.

SYSTRA is committed to the quality of the transport service offered to passengers and supports its clients throughout the testing and commissioning process. Our integration experts define the test strategy, then plan, manage and conduct the tests from the factory to the site, manage the overall tests, organise the handover of the transport system to the operator and supervise the start of commercial operation.

- Tomorrow's infrastructure is also what exists today. Indeed, the transport networks we use on a daily basis may be decades or more old. Yet the risks associated with poor asset management are real, from the design of the assets to their end of life. Taking care of existing networks and implementing good asset management is therefore a prerequisite for the development of sustainable mobility, guaranteeing the safety of users and respecting the environment.
